

In June 2018, the Municipality of Genoa, in implementation of law N 41 of 02/28/1986, set up the design team that oversaw the drafting of the Plan for the Elimination of Architectural Barriers (P.E.B.A.), approved in February 2021

Today the PEBA can be consulted on the geoportal of the Municipality of Genoa at the address: "geoportale.comune.genova.it", by following the keyword PEBA, where the dynamically updated tables can be viewed.

The P.E.B.A. analyzes the municipal territory from the point of view of motor and sensory accessibility, dividing it into 94 Ambits, i.e. portions of the territory where the most important public functions and interests for the citizen are concentrated, returning a map with 4 colors verde: accessibile

- green: accessible
- yellow: partially accessible
- orange: partially inaccessible
- and red: inaccessible

P.lan, it wants to be a tool in the hands of the public administration to plan interventions for the removal of architectural barriers, and at the same time also, thanks to its publication on the geoportal of the Municipality of Genoa, a tool open to citizens who can consult it directly from a smartphone, to check the difficulties he may encounter along an itinerary and/or a visit to a public building or building containing a public function.

With the P.E.B.A, the guidelines for designers to create fully accessible works have also been defined

Particular attention was paid to the historic city center with the excerpt and elaboration of specific analyzes and strategies, defined on the basis of the peculiarities of this exceptional historical and artistic heritage of the city. Five accessible "thematic itineraries" have therefore been identified:

- Art and culture
- Instruction
- Free time
- Trade
- Other Paths

along which the main points of interest are found such as: monuments, museums, universities, historic shops, etc., for which the relative level of accessibility has been indicated.

Finally, a very important aspect to underline, is that Genoa will be the first city in Italy with a P.E.B.A. totally georeferenced and with free data accessible to all on dedicated portals (open data)
